(54) Title: AN IMPROVED METHOD AND APPARATUS FOR BONE REMOVAL

(57) Abstract: An apparatus for removal bones from a fish fillet is presented. A conveyor is provided for conveying the fish fillet and supporting means is arranged on said conveyor for supporting the fish fillet as it is being conveyed by means of imposing the fish fillet on it so that the bones to be removed are exposed. A second supporting means is arranged sidewise to said first supporting means for maintaining the fish fillet in a fixed position as the exposed bones are removed with a bone removal unit, which is arranged above the conveying means.
